

## 1. Job Title

Job Title:	<b>Systems &amp; Infrastructure Engineer</b>
Responsible to:	<b>Head of Systems &amp; Infrastructure</b>
Location:	<b>Leeds – Brewery Wharf</b>
Division:	<b>QA Central Services</b>
Department:	<b>ITAD</b>
Last Updated:	20/04/2022

## 2. Job Purpose

QA are currently looking to recruit a 3rd Line Support Engineer on a permanent basis. You will be responsible for providing 3rd line technical support for the company user base across multiple locations via telephone, onsite and help desk software. You will be required to work proactively to solve support incidents, monitor the progress of calls from inception to resolution and ensure that end-users are informed of progress at all times. The successful candidate will manage and support the business IT communications, systems, workstation and security infrastructure. You will also be supporting the IT infrastructure roll-out projects including planning and implementation. This role will be working within the IT team to ensure that the company IT Service Delivery meets and exceeds customer expectation and business KPIs

## 3. Key Responsibilities and Duties

- Provide a professional and helpful 3<sup>rd</sup> line support service to the end-user base
- To work proactively to solve support incidents
- To monitor the progress of a call from escalation into the 3rd line queue to resolution
- To keep customers informed of the progress of their queries
- To escalate calls to the Head of Systems & Infrastructure using predefined procedures where the resolution falls outside agreed targets
- To carry out 3rd line fault resolution for any workstation, system, infrastructure, data or telephone related problems

# Job Description

- To assist the 1st/2nd line teams in problem solving
- Identify recurring problems and report these to the IT Systems Manager
- To maintain an excellent understanding of the business IT systems/communications infrastructure and architecture so that system and user issues can easily be understood and a clear definition of the problem source can be ascertained
- To keep abreast of new technology developments within the business so that the user base can be assisted with problem resolution at point of contact
- To carry out hardware and software implementations as agreed with the IT Systems Manager
- To maintain suitable control and management documentation in line with departmental requirements/standards
- To manage the business systems, infrastructure, security groups and also physical network access following standard guidelines and policies
- To build and configure Corporate IT systems to pre-defined specifications and ensure adherence to task lists
- Work closely with the IT team to ensure that knowledge is shared and a greater understanding of systems is gained

## 4. Key Performance Indicators - KPI's

- Daily target for support calls closed
- Ensure support is managed within Service Level Agreements
- Ensure projects are completed on time
- 
- 
- 

## 5. Skills, Competencies and Qualifications
